

YoungCoderz Today, Innovators Tomorrow!

Encourage your child to be creators rather than consumers of technology

Young
<Coderz>

Our Mission >

a helping hand to
creative minds to
make games & apps
of their own.

< Our Vision

to empower our
next generation to
become innovators
in technology.

We Value >

Problem Solving
Logical Thinking
Design Solutions
Creative
Confidence.

why YoungCoderz?

YoungCoderz's structured
game based curriculum
empowers students to develop
their programming skills,
computational thinking and
provides a creative mindset
to become innovators with
technology.

Why YoungCoderz Kids & Parents Friendly?

Game based Learning

8:1

Student to Teacher Ratio

Parent, Teacher Communication

Certificate of recognition

Kahoot!

Fun way to refresh technical knowledge

Challenge tasks for fast learners

Demo Day

Showcase their completed projects to parents

After School Classes

Contests & Celebration

Weekend Clubs

CoderZ Ladder

YoungCoderz's game based curriculum is structured to resemble a Coder's Ladder. The ladder defines programming skills from beginner to advanced levels. By completing these various levels, students get to master the fundamentals of software development.

Senior

Junior

Junior Curriculum Roadmap

Python Programming

Coderz are introduced to text based programming using the powerfull technology, Python.

JavaScript Programming

Coderz use text based Scratch inspired JavScript library to make interactive games

Robotic Programming

Coderz learn to control robotics like Sphero mini using drag and drop technology similar to Scratch.

Microbit Programming

Coderz use microbit as an interface to make interactive games and make a robot of their own as well.

Scratch Programming

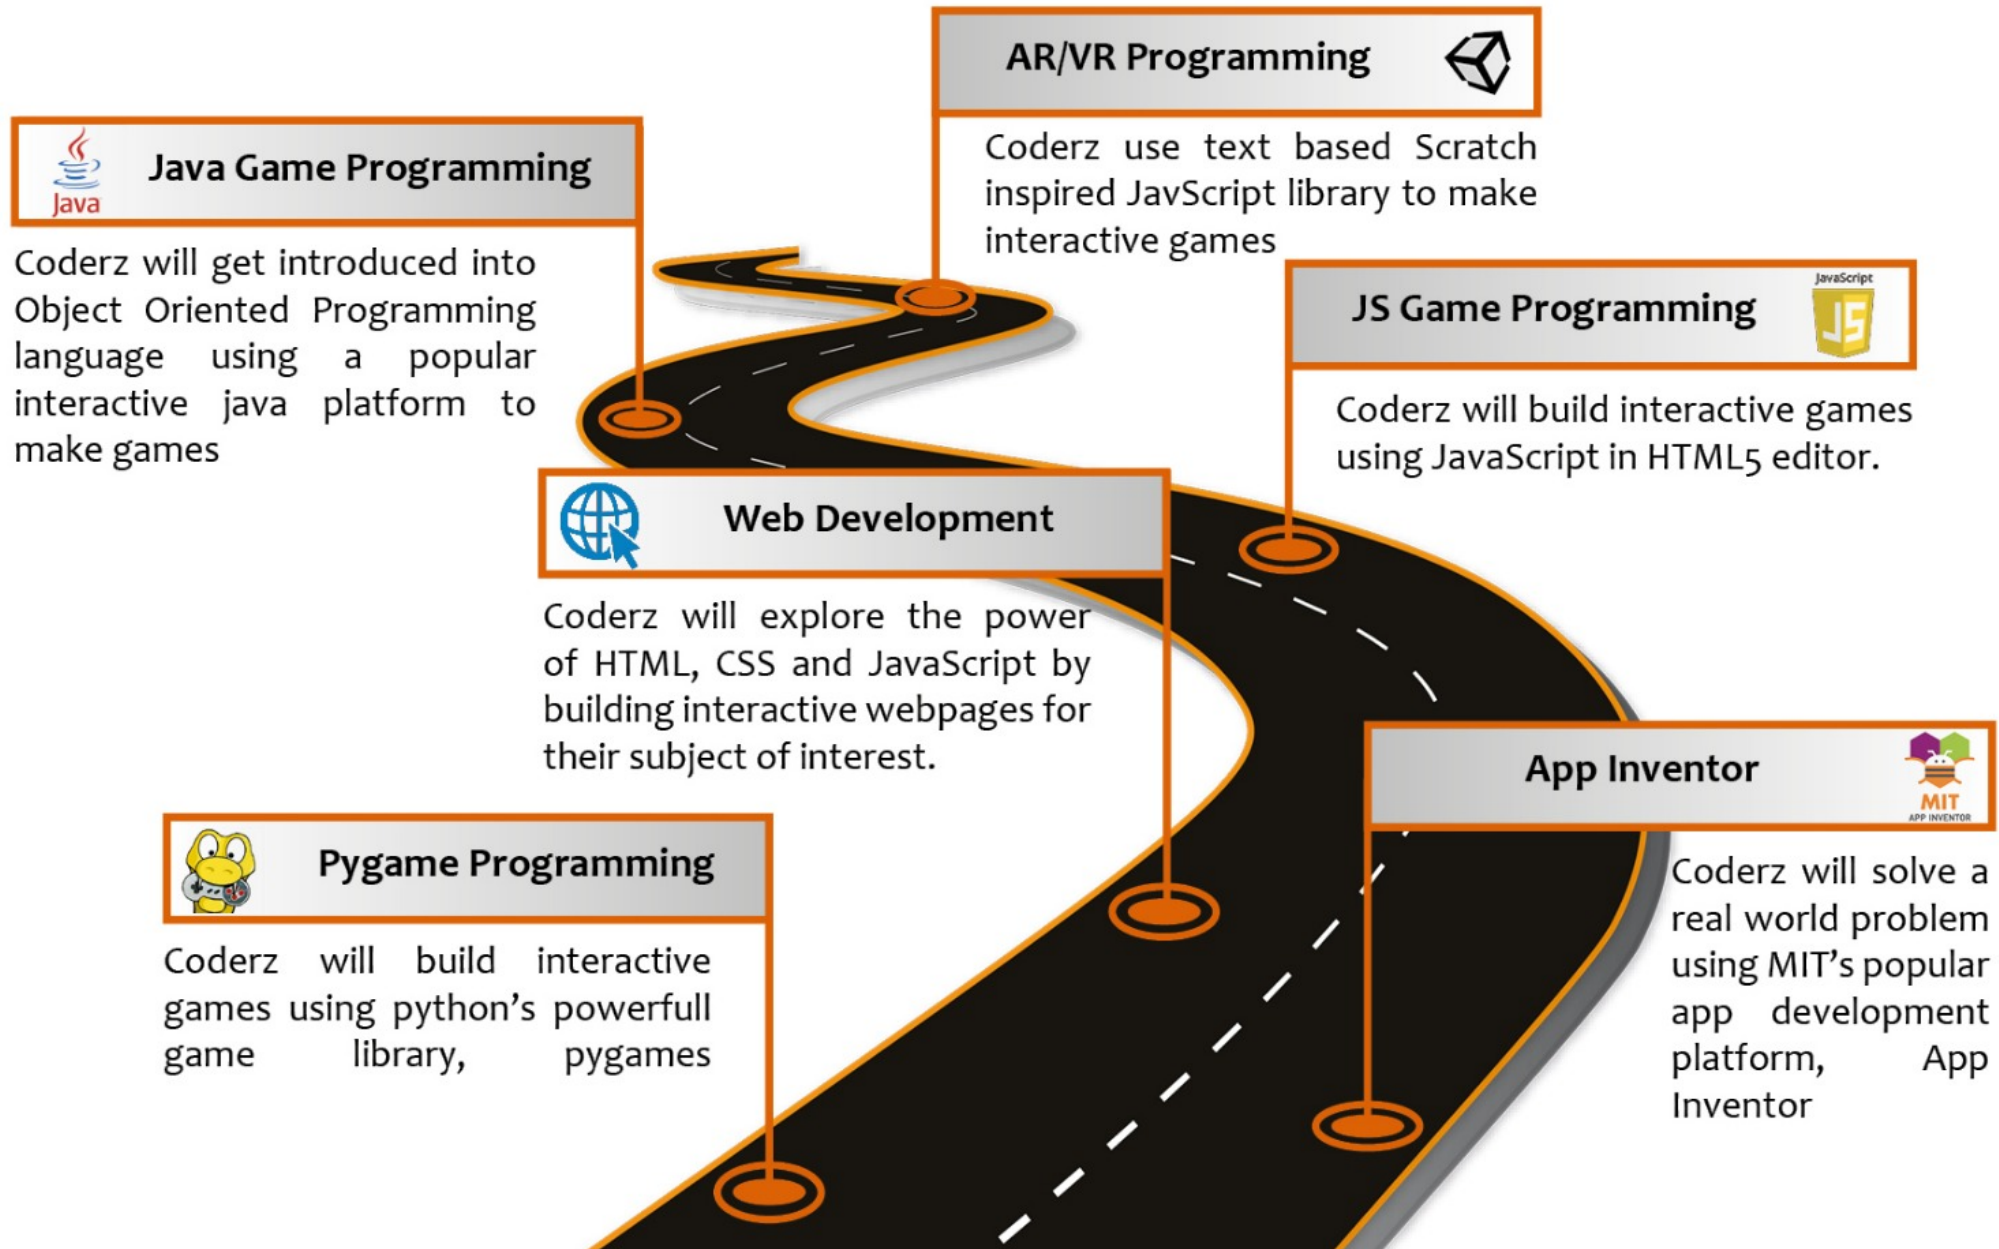

Coderz are introduced to programming using Scratch, a popular drag and drop technology developed by MIT

Scratch GameProgramming

Coderz make interactive games using advanced concepts of Scratch

Success Stories

“

Collaborating with Anu from youngcoderz has been a very rewarding experience for our school. We hosted a coding day where all of our primary years children had **an opportunity to interact with coding on different levels**. Anu kindly volunteered her services for the day and introduced Scratch programming to our youngest children from grade 1 to 3. The grade 4 and 5 children enthusiastically worked in small groups to try and code the Sphero to navigate a maze.

- James Murphy, Teacher at Asker International School.

”

“

Daniel really enjoyed the course. In his own words, he is giving you **“five out of five stars”**. I believe he learned a lot and he proudly shared some of his projects with family members. When I asked him whether he would like to continue, if there is a follow up course, he said: “Absolutely”. Thanks so much for organizing this course. I consider coding skills as a very important part of Daniel’s development. Attending a course where he can both learn and have fun is definitely something we will encourage and support.

- David Pazdera, Father of Daniel Pazdera.

”

“

It is great fun and I love to solve the challenges. I am looking forward to next course.

Emil Volkmer, Student

”

“

It is fun to challenge ourselves through the projects and the teachers are very kind

Gustav Volkmer, Student
